

IOT – We call it SmartConnect

LS SmartConnect is our concept for getting your product on the internet; for monitoring, servicing and controlling.

A LS SmartConnect solution can, as many of our solutions, be configured individually. However, minor cooperation with our development department, is always required, This to ensure that your solution includes necessities to be optimal and gives your unique selling point.

LS Control is assigned as Supervisor and manage the administration of the administrators. Equipment manufacturers whom has chosen the LS SmartConnect solution is assigned as Administrators and control and administer all other user levels.

The security of the connectivity is based on a technology developed by the Danish company Nabto. This technology ensures a secure and problem free communication with the product over the internet without the trouble of setting up firewalls etc.

Please visit our website for further information on our extensive product range. Or contact us by email or phone.
