LSCONTROL

LS SmartConnect is our name for an internet-based online system. If you as manufacturer want to get your products online, our solution provides an easy, secure and effective way to obtain exactly that.

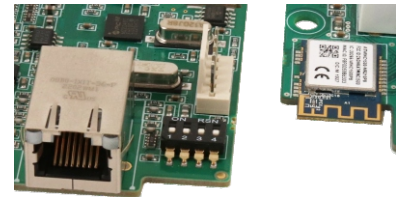

Is specific HardWare needed?

You have 4 options!

Option 1 Your product has a ModBus protocol. You may then connect it to the LS Gateway. The gateway will be programmed according to the parameters you want access to. This option gets you online with either cable or WIFI.

Option 2 Your product is developed by LS Control and is fairly new. In this case an internet connection is most likely already integrated in the HardWare. You get access to the internet through cable or WiFi.

Option 3 You choose to buy one of our standard online-ready products e.g. TopBox.

Option 4 You buy a complete LS platform like ES 2020 which you get customized to the functionalities of your products.

When your product is ready to be online, we have a number of unique tools which we have gathered under the name **LS SmartConnect**.

All LS SmartConnect solutions are based on licenses and number of users. Contact us to discuss your requirements and get a price suggestion.

LSCONTROL

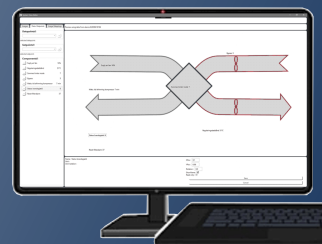

LS SmartConnect Center is your complete service center where you as manufacturer has a full overview of all sold systems.

You get an overview of alarms / operating LOG / data LOG / easy grouping - system overview.

You get the possibility to provide licenses to your sales and service partners. You have the possibility to brand the LS SmartConnect Center with your own company logo.

NOVELTY 2023: Mini BMS / graphical overview.

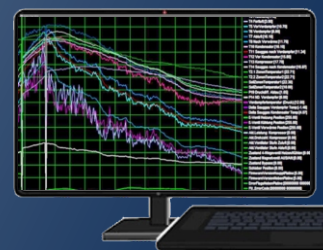

(Requires license for LS SmartConnect Server and LS SmartConnect Center).

LS SmartConnect Datalogger is an expert tool for analyzing and operation monitoring both during development and subsequent field servicing.

From the office you are able to update software, collect datalog files and monitor the usage of your systems already installed in the field.

Requires license for LS SmartConnect Server and LS SmartConnect Center.

LS SmartConnectCenter APP provides an overview of all systems in operation so e.g. a building administrator can get a complete overview of the operation situation. The advantage is getting quick and precise information if a filter needs to be changed or if there are any severe problems which need attention - even before the users realize it. The LS SmartConnect Center APP is also called a mini BMS system.

LS SmartConnect Center

LS SmartConnect APP - is an operating app. Using the app requires that product is online and connected to the LS SmartConnect Server.

It is also possible to get your own unique app with your branding developed. Can be used with both Android and iOS.

LS SmartConnect

LS SmartConnect Config APP - This app is used for configuration of a system or controller connected through USB or Bluetooth.

The LS SmartConnect Config App recognizes your product and inserts your logo, special configuration, menu choices and colors.

LS SmartConnect Config is operational even when your mobile is offline.
